Positions at the Gonda Brain Research Center

[The Leslie and Susan Gonda \(Goldschmied\) Multidisciplinary Brain Research Center](#) at Bar-Ilan University anticipates new tenure track positions (rank commensurate with qualifications and experience), starting in the academic years 2018-2019. We are looking for excellent early-stage scientists who aspire to establish innovative and interdisciplinary research programs in neuroscience or related fields essential for understanding the brain. While all applicants will be evaluated for merit, we are particularly interested to recruit scientists with expertise in theoretical and computational neuroscience. The appointments are subject to budgetary approval.

The [Gonda Brain Research Center](#) at Bar-Ilan University brings together researchers in a variety of fields essential for understanding the brain, including biology, psychology, linguistics, computing and physics. Research at the Gonda Center studies the brain at all levels - from behavior and cognitive processing through neural circuits, all the way to molecular mechanisms, in health and in disease.

Candidates are expected to have a PhD (or equivalent) and post-doctoral training in relevant fields, and to show excellent track-record for their stage of career. Interested candidates should first submit a letter of application and a curriculum vita. For more information enquiries and applications please contact Tami Rubenov (tami.rubenov@biu.ac.il). BIU is an equal opportunity employer and all qualified applicants will receive consideration for employment.
